Sequence 1, Application US/08145705A

Patent No. 5489513

GENERAL INFORMATION:
APPLICANT: Springer, Wolfgang; Plempel, Manfred;
TITLE OF INVENTION: SPECIFIC GENE PROBES AND
TITLE OF INVENTION: PROCESSES FOR THE DIAGNOSTIC;
TITLE OF INVENTION: INVESTIGATION OF CANDIDA
TITLE OF INVENTION: ALBICANS
NUMBER OF SOUDENCES: 44

CORRESPONDENCE ADDRESS:
ADDRESSEE: SPRUNG HORN KRAMER & WOODS
STREET: 660 White Plains Road
CITY: Tarrytown
STAME: New York
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5 inch, 1.4 MB storage

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerse chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess blodiversity and to produce other types of date and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence date for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   23 ASDAlaProGluLysLeuAlaLeuArgAsDGluGluArgAlalleAspGluLeuLysLys 42

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, ollymers chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity.
infections, abscesses and spontaneous abortion. This sequence represents DNA encoding the S. dysgalactiae Mig protein of the invention.
                                                                                                                                                                                                                                                                       128 AspValLysLysThrLysAspThrLysProValValLysLysGluGluArgGlnAsnVal 147

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chair reaction (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polyuncleotide sequences have applications in classomatics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and conditionation of any actis sequences of the invention.

Cand to produce other types of the invention of mutations diagnostic coding sequences of the invention.

Canno acid sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from MIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

The exceptor protein. The sequence and composition are useful for treating or preventing a bacterial infection e.g. a streptococcal infection which causes mastitis in a vertebrate subject. The vaccine compositions can also be used to treat other streptococcal infections cansed by S. agalacties, such as septicaemia, meningitis, bacteraemia, impetigo, arthritis, urinary tract

The proteins produced by MD-1 are capable of specifically binding the constant region of the heavy chain of IgG in the same way as neutral Fc receptors. They can be used to analyse the structure and function of Fc receptors, as well as in antibody production, cell culture, diagnosis and therapy. They can be used to treat disorders such as leukaemia and lymphoma, cancer and immune disorders.

SG-3 is capable of specifically binding the constant region of the heavy chain of IgG in the same way as neutral FC receptors. It can be used to analyse the structure and function of FC receptors, as well as in antibody production, cell culture, diagnosis and therapy. They can be used to treat disorders such as leukaemia and lymphoma, cancer and immune disorders.
                                                                                                                                                                                                                                                                                            Fc receptors; heavy chain; leukaemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 region of an immunoglobulin

The proteins produced by MD-2 are capable of specifically binding the constant region of the heavy chain of IgG in the same way as neutral Fc receptors. They can be used to analyse the structure and function of Fc receptors, as well as in antibody production, cell culture, diagnosis and therapy. They can be used to treat disorders such as leukaemia and lymphoma, cancer and immune disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

(ABS7737-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapoutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           3506 GCTCCAGAAACAGAAGCAGCAACAAGACTACGGAGTCTAGCAATGATGTGGTGGAAGTG 3565
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3566 GCCACAGAGGGCAAAGAAACAGTTTTAGAAGTGCCCGCTGCCGAGGCCCAAGGAAGCGAA 3625
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            84 AsnalaalaSerAspalaLeuGluAlaLeuAlaAspGlnThrAspAlaLeuGlnSerGlu 103

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ŏ
imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human hote: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

One clone, which expressed both activities, was analyzed to obtain DNA encoding the FAM-binding protein, MIG (AAR71929). The mig gene is given in AAQ89196.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques for eatern normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in itssue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The Invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     detection reagent for detecting 1000 or more for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from prosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1342 GAAAAGCAGGCTGCTGCTAAGGCCAAAAAGGCTGCCGAGGAGGCCCCCAAAATCGCTGCC 1401

              A phage lambda EMBL3 library of S. dysgalactiae 8215 DNA was analyzed for alpha-2-macroglobulin-, BSA- and IgG-binding activity. Clone lambda-SD1, which expressed all 3 activities, was analyzed to obtain DNA encoding the SA-binding protein, MAG. The mag gene (given in Q86080) encoded a 44 kba MAG protein (R71670). Recombinant, immobilized MAG was used for serum albumin affinity purification, detection and assay.

Clone lambda-SDL, which expressed all 3 activities, was analyzed to obtain DNA encoding the FAM-binding protein, MAG. The mag gene (given in Q89197) encodes a 44 kba protein (R71929).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, collymerase chain reaction (PER) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) and its binding antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in classomatics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and and confine sequences of the invention.

```
The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, colymerase chair reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags consideritying expressed generating antibodies against it, detecting or to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in casponsible for genetic disorders or other trails to assess biodiversity and to produce other types of data and products dependent on DNA and adiagnostic coding sequences of the invention.

Consideration, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1279 TCAGAGGCCGCCACTTCAGCACGAGATGCGGTGGCCTCAAAAGAGGCACAAAATCATCA 1338

The bound protein is useful in purification and detection of Igs and framents.
                                                                                                                                                                                                                                                                                                                                                               Immobilised protein G variants - used for detection, isolation and purificn. immunoglobulin(s) and immunoglobulin fragments
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Streptococcus Protein G; variant; IgG binding activity; immunoglobulin; Lancefield Group G; bacterial Fc receptor; ss.

The present invention describes a construct for connecting an antibody or antibody fragment to a liposome. The construct comprises protein G' or antibody fragment to a liposome. The construct comprises protein G' and a linking molety for connecting the protein G' to the liposome.

Also described are: (1) a cliposomal delivery vehicle comprising: (a) a cliposome; and (b) a connecting molety connected to the liposome, which specifically binds the Fc region of an antibody, for connecting the control of the liposome; by providing a construct comprising a linking molety and a connecting molety and a connecting molety and a connecting molety and a connecting molety and connecting molety and a connecting molety and a connecting molety and a connecting molety and the construct and sonicating the liposome, for binding to binding moleties are exposed on a surface of the liposome, for binding to binding molety, and to facilitate the binding between them. The connecting molety, and to facilitate the binding between them. The products can be used for the delivery of diagnostic or therapeutic gent, e.g. antibiotics, antidepressants, antidepressants, antitumourlgenics, antivirals, cytokines, hormones, imaging agents. Connecting molety provides a liposomal delivery complex having improved connecting molety provides a liposomal delivery complex having improved connecting molety provides a liposomal delivery complex beying improved the connecting molety provides a liposomal delivery complex provides a liposomal delivery complex provides a liposomal delivery complex provides a liposomal delivery complex provides a liposomal delivery complex provides a provide the connecting molety provides a liposomal delivery complex provides a liposomal delivery complex provides a liposomal delivery complex provides a liposome provides a liposome provides a liposome provides a liposome provides a liposome provides a liposome provides a liposome provides a liposome provides a liposome provides a liposome provides a liposome provides a liposome p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              targeting efficiency. As a result of the binding between Protein G' and the Fr egion of antibodies, protein G' shields the Fr regions of the attached antibodies from non-specific binding to cell-surfaces, other proteins, and anatomical structures. The present sequence encodes

The Protein G has IgG-binding activity which has been localised to the B repeating structure. Streptococcal Protein G variants comprising the B domains are claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Streptococcus strain G 148; protein G'; protein G primer; liposome;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  40
                                                                                                                                                       Protein G gene product may be modified allowing the variant to be imobilised and exhibit different binding profiles. The bound protein is useful in purification and detection of Igs and framents.

E.coli, and expressed at high levels.
The variants have a higher binding efficiency and capacity for immunoglobulin, and may be used for purifying, detecting and isolating antibodies.
                                                  Recombinant Protein G variants - obtd, using a cloned gene encoding Protein G from Streptococcus sp., used for binding immunoglobulin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 1950 BP; 706 A; 323 C; 398 G; 523 T; 0 other;

protein G of group G Streptococcus. GRAB protein and peptides derived from it are used in vaccine compositions for generating a protective immune response against group A Streptococcus. Antibodies against GRAB are useful for treating Streptococcus pyogenes infections. The protein is also useful for purifying alpha2M from a sample. The present sequence is a DNA encoding partial GRAB protein from S. pyogenes strain AP49. The protein has alpha2M binding region and is useful in vaccine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           345

The patent discloses a new family of proteins termed GRAB (protein G related alpha2M binding protein) from Streptococcus pyogenes which have the ability to bind alpha2-macroglobulin (alpha2M) and show homology to protein G of group G Streptococcus. GRAB protein and peptides derived from it are used in vaccine compositions for generating a protective immune response against group A Streptococcus. Antibodies against GRAB are useful for treating Streptococcus pyogenes infections. The protein is also useful for purifying alpha2M from a sample. The present sequence is a DNA encoding partial GRAB protein from S. pyogenes strain KTL9. The protein has alpha2M binding region and is useful in vaccine
                                                                                                                                                                                                      New alpha2M binding protein for generating a protective immune response to group A streptococcus and purifying the binding protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 100

GRAB protein and peptides derived from it are used in vaccine compositions for generating a protective immune response against group A Streptococcus. Antibodies against GRAB are useful for treating Streptococcus pyogenes infections. The protein is also useful for purifying alpha2M from a sample. The present sequence is a DNA encoding partial GRAB protein from S. pyogenes strain API.

protein G of group G Streptococcus. GRAB protein and peptides derived from it are used in vaccine compositions for generating a protective immune response against group A Streptococcus. Antibodies against GRAB are useful for treating Streptococcus pyogenes infections. The protein is also useful for purifying alpha2M from a sample. The present sequence is a DNA encoding full-length GRAB protein from S. pyogenes strain SF370.
                                                                                                                                                                                                                                                                                                                                                                                              218

The patent discloses a new family of proteins termed GRAB (protein G related alpha2M binding protein) from Streptococcus pyogenes which have the ability to bind alpha2-macroglobulin (alpha2M) and show homology to protein G of group G Streptococcus. GRAB protein and peptides derived from it are used in vaccine compositions for generating a protective immune response against group A Streptococcus. Antibodies against GRAB are useful for treating Streptococcus pyogenes infections. The protein is also useful for purifying alpha2M from a sample. The present sequence is a DNA encoding partial GRAB protein from S. pyogenes strain KTL3.
                                                                                                                                                                                             New alpha2M binding protein for generating a protective immune response to group A streptococcus and purifying the binding protein \,

                                                                                                              AAD00559;
                                                                              RESULT
                                                                                                              The patent discloses a new family of proteins termed GRAB (protein G related alpha2M binding protein) from Streptococcus pyogenes which have the ability to bind alpha2-macroglobulin (alpha2M) and show homology to protein G of group G Streptococcus. GRAB protein and peptides derived from it are used in vaccine compositions for generating a protective immune response against group A Streptococcus. Antibodies against GRAB are useful for treating Streptococcus yapogenes infections. The protein is also useful for purifying alpha2M from a sample. The present sequence is a DNA encoding full-length GRAB protein from S. pyogenes strain SF370.
                                                                                                                                                                                                  New alpha2M binding protein for generating a protective immune response to group A streptococcus and purifying the binding protein \dot{}

Pred. No. 1s the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Streptococcus pyogenes strain SF370 GRAB protein coding region. (first entry) 29-AUG-2000 AAD00560; 

GRAB protein; protein G related alpha2M binding protein; vaccine; alpha2-macroglobulin; group A Streptococcus; GAS; antibiotic; immune response; Streptococcus pyogenes infection; ds.

Streptococcus pyogenes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 9, Application US/07876280
Patent No. 5262158
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Payne, Jewel M.
APPLICANT: Payne, Jewel M.
APPLICANT: Bagley, Angela L.
TITLE OF INVENTION: No. 5262158el Bacillus thuringiensis Isolates for TITLE OF INVENTION: Controlling Acarides
NUMBER OF SEQUENCES: 30
CORRESSONDENCE ADDRESS:
ADDRESSEE: David R. Saliwanchik
STREET: 2421 N.W. 41st Street, Suite A-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ő
